

Challenging Summer Mathematics Programs For High School Students

Summer, 2006

Teachers and Counselors: Please help with distribution of this document to talented mathematics students and their parents.

Quick links to all programs and future versions of this booklet can be found on the AMS web site at www.ams.org/employment/mathcamps.html

Please note: It is suggested that students submit their applications **well in advance of the application deadlines.**

All Girls/All Math Summer Camp for High School Girls

University of Nebraska, Lincoln, NE

UNL Center for Science, Math and Computer Education

web address: *<http://www.math.unl.edu/pi/outreach/agam>*

251 Avery Hall

Lincoln, NE 68588-0131

The All Girls/All Math summer camp at the University of Nebraska is a week long program for high school girls from across the country. Campers will attend a class in Codes three hours every morning. In this class, students will learn basic number theory and applications to cryptography. In the afternoon, students will attend minicourses in such areas as Bioinformatics, Knot Theory and Aerodynamics. The camp offers girls a unique opportunity to explore sophisticated mathematics in an all-girl environment and to meet other girls and women who have a love and talent for mathematics. With only 28 campers, we have a low camper-staff ratio and the staff is experienced and enthusiastic (and all-female). This is the 10th year that we have offered the camp and previous campers have found their experience very rewarding. Said one, "It was the best week of my life!"

During the camp, there will also be some opportunity to explore other career possibilities. A scientist from the National Security Agency will give a presentation to the campers about life and work at the NSA. The camp also offers recreational evening activities and opportunities to build life-long friendships.

Girls will spend the week in a university dormitory with a counselor who is also a math graduate student, and they will have meals in the dormitory cafeteria. The cost for the camp is \$250 including room and board (\$125 for Nebraska students). Scholarships are available. For more information or an application, contact agam@math.unl.edu or go to our website at:

<http://www.math.unl.edu/pi/outreach/agam>. Application deadline is May 15, 2006.

Canada/USA Mathcamp

University of Puget Sound, Tacoma, WA

Contact: *Mira Bernstein, Executive Director*

Cambridge, MA 02139*

e-mail: *mira@mathcamp.org*

web address: *<http://www.mathcamp.org>*

Canada/ USA Mathcamp is a five-week-long summer program for 110 mathematically talented students. Mathcamp 2006 will take place from July 2 to August 6, at the University of Puget Sound in Tacoma, Washington. Students from Canada, USA and around the world, who are between 14 and 18 years old, are invited to apply; exceptional 13-year-olds will be considered as well.

Unlike most academic camps, Mathcamp does not have a set curriculum or even a list of required activities. In the words of one student, the camp's design "helps convey the idea that math can be almost anything that you want it to be". We encourage our faculty to teach what they are most passionate about, and then we let the students choose what they are most interested in learning. Class topics in the last two years have included topology, voting theory, theoretical computer science, number theory, fluid dynamics, information theory, probability, cryptography, mathematical logic, problem-solving ... the list goes on and on. Classes vary widely in duration, level, and format, but all are interactive, with the students actively engaged in the process of discovery. In addition to classes, students have the option of attending lectures by distinguished visiting researchers, doing a research project and participating in problem-solving competitions.

With five or more different mathematical activities offered in any given hour, choosing just one can be tough. With the guidance of an academic advisor, each student is challenged to design a program of study reflecting his or her personal interests and abilities. Some students decide to devote most of their time to a particular class or project, while others seek a broader perspective on the various branches of mathematics. Some are most interested in sharpening their problem solving skills and preparing for competitions, while still others want to learn about applications of mathematics to other fields. Almost all of these students, however, say that academic freedom and the chance to take charge of their

own education are the aspects of Mathcamp that they value most.

In the evenings, the same wealth of opportunities continues into the non-academic sphere, with students and staff organizing numerous activities, from soccer games and bridge tournaments, to ballroom dancing classes, to live action role-playing games. On the weekends, the camp offers numerous field trips such as hiking, white water rafting and visits to local museums and amusement parks.

Mathcamp is committed to enabling every qualified student to attend, regardless of financial circumstances. The full camp fee, including room, board, tuition and weekend activities is \$3,195. However, almost 50% of students qualify for an automatic reduction based on family income, and many students receive further financial assistance, including some full scholarships.

COSMOS - California State Summer School for Mathematics and Science

University of California (4 campuses: Davis, Irvine, Santa Cruz, San Diego)

Contact: *(see below for addresses of the four locations)*

Phone: (530) 754-7325

Fax:

Mailing
address:

e-mail: *see below*

web
address: <http://www.ucop.edu/cosmos/>

The California State Summer School for Mathematics and Science (COSMOS) is an academic four-week residential program for talented and motivated students who are completing grades 8 - 12. The COSMOS courses address topics not traditionally taught in high schools. These courses are in the areas of astronomy, computer science, wetlands ecology, ocean science, robotics, neuroscience, cognitive science, game theory, volcanology, and more.

The California State Legislature established COSMOS with a mission to motivate the most creative minds of the new generation of prospective scientists, engineers, and mathematicians who will become leaders for California, the nation and the world. The program is designed to create a community of students who participate in an intensive academic experience delivered by distinguished educators, scientists, and researchers. The program has three locations (see below).

Students currently enrolled in grades 8-12 are eligible to apply for admission to COSMOS. To be considered for admission, students must have achieved academic excellence in science and/or mathematics.

Tuition for the summer 2006 program will be \$2,000 for California students (\$6,200 for out of state students). Tuition covers the costs of housing and meals and some field trips and special events.

Students may apply for need-based financial aid through the application process. Full and partial scholarships are awarded to applicants from California to help with the cost of tuition.

Please contact one of the following locations for further information.

The 33rd Hampshire College Summer Studies in Mathematics will invite approximately 45 motivated and talented students to join college professors, math majors and graduate students on our rural campus to do, share and enjoy mathematics. The entire faculty live in the program dormitory and join students for meals and recreational activities, including more than 8 hours of mathematics each day.

In small and lively classes and 3 hour evening problem solving seminars, 15 students guided by a professor and two assistants, will collaboratively investigate challenging and rewarding problems from number theory, group theory, combinatorics, probability, the fourth dimension, graph theory, infinity, fractals, chaos and other active branches of mathematics. Emphasis will be placed on the processes of mathematical thought - discovering patterns, formulating questions and definitions, making conjectures, and creating proofs - rather than the simple accumulation of results. By doing mathematics and living with mathematicians, participants will experience what it is like to be a mathematician.

Activities include classes for four hours each morning (M-S), evening problem seminars (M-F), daily Prime Time Theorems, visits by pure and applied mathematicians, a weekly program journal, computers, math films and field trips. Regular contacts (including regional reunions, a website, Yellow Pig's Day reunions during the program, mailings, email, videotapes, pamphlets and software) will seek to engage alumni and their teachers with serious mathematics and to maintain the spirit of the Summer Studies intellectual community.

Institute of Technology Center for Educational Programs (ITCEP)

University of Minnesota

Minneapolis MN 55455*

e-mail: *itcep@math.umn.edu*

web address: *<http://www.math.umn.edu/itcep>*

The Institute of Technology Center for Educational Programs (ITCEP) offers summer mathematics enrichment programs for pre-college students ages 8 - 17. The common purpose of these programs is to keep young students interested in mathematics, science and engineering, and to give them a realistic picture of what these disciplines are all about. Institutes do this in three ways: first, by immersing students in mathematics coursework, establishing the foundation for related, interactive science and engineering activities; second, by introducing students to as many positive

role models and opportunities as possible; and third, by fostering friendships. Students thrive intellectually when working with other local, national, and international students who, like themselves, enjoy being challenged in math and science. Recreational and social activities are critical contributors to forming lasting friendships.

Programs will be held on the Minneapolis campus of the University of Minnesota. Residential students live in Argyle House, a privately owned building designed especially for residential academic programs. All students attend classes in Argyle House and in various facilities on the Twin Cities campus.

Students are supervised at all times. The staff-to-student ratio of 1:5 ensures close interactions between students and instructors. The instructional team is comprised of University faculty, undergraduates, and graduate students. Residential mentors live with students in Argyle House.

Within thirty days of receipt of completed application materials, ITCEP mails acceptance packets, which include needs- and merit-based scholarship information, to eligible applicants. Applications are accepted until each session is filled. Sessions have a maximum enrollment of 15 students each.

MathPath

University of California, Santa Cruz

Contact: *George R. Thomas, Executive Director*

Phone: *519-672-7990*

Fax: *519-434-6244*

Mailing address: *MathPath
Box 416*

*3560 PineGrove Avenue
Port Huron, MI 48060*

e-mail: *info@mathpath.org*

web address: *http://www.mathpath.org*

MathPath is a four-week summer program for students in the age range of 12-14 years who are profoundly gifted in mathematics. MathPath is held in answer to this question: What is the mathematics training appropriate for the future mathematician who is now in middle school or early high school? Thus, the purpose of the program is to catch the students at an early age, place them in the habit of writing mathematics properly, help them gain comfort with mathematical rigor, instill in them the tendency to ask questions on the scope of a presented result and train them to construct mathematical proofs and give them a sense of the early history of mathematics. The minor purpose of the program is to show the heuristics of problem solving. These purposes are described in a nutshell by MathPath's slogan "Bright & Early."

A MathPath student will face several strands of interactive sessions during a four-week period and emerge with a broader and deeper understanding of mathematics. Mathematics is an ever-widening and deepening stream which, however, being narrow and less deep up to the mid 1600's, affords, with the stories comprising the history of mathematics up to that time, a solid foundation to the brightest students. The axiomatic approach being the germ of the analytic method of proof, students are also immersed in Hyperbolic Geometry.

The other method of proof, the transformational type, is introduced to the student in the course on Analytical Geometry. The fun of communicating precisely what one means in a mathematics sentence is taught in the "Writing of Mathematics" strand. Noting that the creation of mathematics proceeds from answers to questions - the conjecture and prove process - rather than from questions to answers, the problem solving sessions for the advanced group at MathPath deal mainly with "prove" and "show" problems that lead students to ask questions like "will this also be true," or "will this hold in general." Conjecturing the underlying structure by observing the patterns is part of the activity in the "Communal Mathematical Investigations" strand at MathPath.

The sessions at MathPath are led by professors who are experts in training the young students of middle school and early high school age. Research has shown that a higher proportion of girls than boys lose interest in mathematics in middle school years; therefore, although boys and girls must equally show evidence of talent to qualify, MathPath strives harder to recruit girls with the highest talent and give them training and peers.

Michigan Math and Science Scholars Summer Program

University of Michigan, Ann Arbor, MI

Contact: *Warren Noone, MMSS Program Coordinator*

e-mail: *mmss@umich.edu*

web address: *<http://www.math.lsa.umich.edu/mmss/>*

Each year, the Michigan Math & Science Scholars program attracts a broad spectrum of students from intensely dedicated young mathematicians to students who are open to learning more about mathematics in a congenial setting, and who might be drawn into a deeper interest in the field. Our student body is diverse, all are equally welcome, and all find appropriate challenges. Students can attend 2 two-week mini-courses on mathematics, statistics and the gamut of physical sciences. During the summer of 2006, we will offer at least seventeen such mini-courses, nine of which will be in math and statistics. Confirmed courses for the summer of 2006 include, "Codes, Ciphers and Secret Messages", "Mathematical Modeling in Biology", "Mathematics and the Internet", "Sampling, Surveys, Monte Carlo and Inference", "Combinatorial Combat", "Fortunes Made and Lost: Financial Mathematics", "Pythagorean Triples and Number Theory", "Fibonacci Numbers", and "Games and Geometry".

In a typical day, students attend morning lectures and other activities with University of Michigan faculty members and spend afternoons in computer labs, working on problem sets and doing research with advanced graduate students. Sports and social activities under the supervision of University of Michigan graduate and undergraduate counselors (including many former Michigan Math and Science Scholars) are the main focus of evenings and weekends, although there is always a group of students to be found doing yet more mathematics after the formal learning period has ended. To encourage participants to continue developing mathematically, all students receive full computing privileges at the University of Michigan for the duration of the program.

PROMYS

Boston University,
Boston, MA

Contact: *Glenn Stevens, Director*

Phone: *617-353-2563*

Fax: *617-353-8100*

Mailing address: *PROMYS
Department of Mathematics
Boston University
111 Cummington Street
Boston MA 02215*

e-mail: *promys@math.bu.edu*

web address: *<http://www.promys.org>*

PROMYS offers a lively mathematical environment in which ambitious high school students explore the creative world of mathematics. Through their intensive efforts to solve a large assortment of unusually challenging problems in number theory, the participants practice the art of mathematical discovery -- numerical exploration, formulation and critique of conjectures, and techniques of proof and generalization. More experienced participants may also study abstract algebra, geometry and symmetry, or combinatorics. Problem sets are accompanied by daily lectures given by research mathematicians with extensive experience in Professor Arnold Ross's long-standing Summer Mathematics Program at Ohio State University. In addition, a highly competent staff of 18 college-aged counselors live in the dormitories and are always available to discuss mathematics with students. Each participant will meet with professional mathematicians several times per week for problem-solving and open-ended explorations. Special lectures by outside speakers offer a broad view of mathematics and its role in the sciences.

PROMYS is a residential program designed for 65 ambitious high school students from grades 9 through 12. Admission decisions will be based on the following criteria: applicants' solutions to a set of challenging problems included with the application packet; teacher recommendations; high school transcripts; and student essays explaining their interest in the program.

Cost: The cost of room and board and instructional fees is \$2,350. Financial aid is available. PROMYS is dedicated to the principle that no student will be unable to attend because of financial need.

PROMYS is directed by Professor Glenn Stevens. Application materials can be obtained by writing to PROMYS, Department of Mathematics, Boston University, 111 Cummington Street, Boston, MA 02215, by email at promys@math.bu.edu, by visiting our Web site at <http://www.promys.org> or by calling (617)353-2563 . Applications will be available in January and accepted from then until June 1, 2006.

Ross Mathematics Program

The Ohio State University, Columbus, OH

Contact: *Dr. Daniel Shapiro, Director*

Phone: *614-292-5101*

Fax: *614-292-1479*

Mailing address: *Ross Mathematics Program
Department of Mathematics
The Ohio State University
231 W. 18th Ave.
Columbus, OH 43210*

e-mail: *ross@math.ohio-state.edu*

web address: *<http://www.math.ohio-state.edu/ross>*

Participants in the Ross Mathematics Program are involved in an inquiry-based study of abstract mathematics. For the eight weeks of the program, students are immersed in a world unlike anything they have seen before. This is the first time most of them will be asked to consider entirely new questions and to develop new approaches and methods. Instead of the standard classroom approach of presenting facts for memorization, we build a community of scholars who struggle with basic mathematical questions and discover many of the facts for themselves. By working through examples they come to recognize which of their discoveries will be the most useful.

By living in this community and participating in this distinctive style of learning students will benefit in several ways. They acquire a deep appreciation of the ideas they have tackled and they gain some understanding of scientific thinking. During the course of the summer, most participants arrive at certain basic realizations. For some it comes early on while for others the change is more gradual, but by the end of the summer they begin to relish their ability to discover things on their own and they gain a taste for hard problems. They search for patterns and ideas wherever they can. Once the spark of creative thought is lit, it burns bright in them during that summer and, we hope, for the rest of their lives.

Copies of application materials are available on the Ross Program web page: <http://www.math.ohio-state.edu/ross>. Information can also be obtained by e-mail (ross@math.ohio-state.edu), telephone (614-292-5101) or paper mail.

Rutgers Young Scholars Program in Discrete Mathematics

Rutgers University, New Brunswick, NJ

Piscataway, NJ 08854-8019*

e-mail: *toti@dimacs.rutgers.edu*

web address: *<http://dimacs.rutgers.edu/ysp/>*

The Rutgers Young Scholars Program in Discrete Mathematics is designed to encourage talented students to consider careers in the mathematical sciences. Selected students participate in an intensive four-week academic program that provides a challenging introduction to discrete mathematics - a new and growing area of the mathematical sciences with many applications on the cutting edge of modern research. During the program, you will develop and enhance your problem-solving abilities by applying mathematical concepts to a wide range of problems. You will also meet distinguished professionals in the field of discrete mathematics who will serve as role models and mentors and help you decide if mathematics is the right field for you. Teaching assistants who are embarking on their own careers in mathematics will provide additional academic support. You will also have an opportunity to participate in a year-long research project.

Approximately thirty high school students from across the United States will be selected for admission. Students will participate in instructional sessions, field trips, research projects, technology-based activities (including a Robotics Challenge) and workshops on careers in the mathematical sciences. Informal evening and recreational programs will

also be provided.

The program is held on the Busch campus of Rutgers University. Students are housed in a modern, air-conditioned residence hall. The classroom building, computer laboratories, student center and recreation center are within walking distance of the residence hall. Residence life staff members coordinate the residence program and recreational activities.

The cost of the program is \$3,500, which includes tuition, materials, housing, and meals. A limited number of scholarships will be available for students in need.

SEARCH

Mount Holyoke College, South Hadley, MA

Contact: *Dr. James Morrow*

Search @ SummerMath

Mailing address: *Mount Holyoke College
50 College Street*

South Hadley, MA 01075-1441

Phone: *413-538-2608*

Fax: *413-538-2002*

e-mail: *search@mtholyoke.edu*

web address: *http://www.mtholyoke.edu/proj/search*

If you want to explore ideas for your future, see another side of mathematics, work in a group, spend a month on a college campus - and you take yourself seriously - then SEARCH might be for you!

The SEARCH Program at Mt. Holyoke College is designed for young women who have done very well in high school mathematics, have a sense of adventure and would like to experience a research-like atmosphere in mathematics. Prospective students should have a good working knowledge of algebra and geometry, strong logical reasoning ability and a strong desire to explore open-ended problems in small groups guided by a teacher and an undergraduate teaching assistant.

During the day students will take two classes, graph coloring, modular arithmetic, combinatorics and symmetry groups. There will also be instruction in the use of the mathematical software Maple and Excel spreadsheet software. There will be field trips, and - most of all - lots of interesting problems to work on! Students will have the unique opportunity to live on a college campus, meet a diverse group of students from across the country and find out some surprising things about mathematics. SEARCH is designed to give the feel of a research laboratory and of the world and work of mathematicians. Unique to this program is the chance to work on problems of your own design!

Many more details plus application materials can be found on our web pages at:
<http://www.mtholyoke.edu/proj/search/>

Stanford University Mathematics Camp (SUMaC)

Stanford University

Contact: *Dr. Rick Sommer*

Phone:

Fax:

Mailing address: *SUMaC
Department of Mathematics
Stanford University
Stanford, CA 94025-2125*

e-mail: *sommer@math.stanford.edu*

web address: *http://math.stanford.edu/sumac*

The Stanford University Mathematics Camp (SUMaC) is a four-week residential summer program designed for high school students who have exceptional interest and ability in mathematics, who enjoy being challenged with in-depth mathematical pursuits and who will be entering their junior or senior years in the Fall. SUMaC's goals are to provide an intensive exposure to advanced mathematics in a supportive atmosphere, to give students a chance to interact with like-minded peers as well as Stanford undergraduates, graduate students and faculty, to convey some of the excitement and beauty of mathematics, and to motivate further study in mathematics or related subjects.

While the development of problem-solving skills is an important aspect of the program, SUMaC's focus is not on math-contests training, nor is it intended to be equivalent to a college-level course; rather, it is directed at helping students attain a deep understanding of some general and important mathematical ideas.

SUMaC has maintained a relatively even balance of girls and boys, and has drawn students from over twenty states and a dozen foreign countries. Students come from many backgrounds and cultures. Admission is by a competitive process which involves an entrance examination. Scholarships are offered so as to allow all admitted students to attend.

SUMaC's academic component consists of two tracks: Program I centers on abstract algebra and number theory, and covers basic group theory with an emphasis on symmetry groups, unconstructibility in geometry, coding theory and

cryptography; Program II is devoted to topics in low dimensional topology, leading to an exploration of the fundamental group and the classification of surfaces. Counselors and tutors are primarily Stanford graduate students and undergraduate math majors, and include SUMaC alumni. Courses are taught by instructors from the Stanford math department and Stanford's Education Program for Gifted Youth.

The daily schedule includes morning lectures and time devoted to working on problem sets and individual tutoring. Students are introduced to many other mathematical ideas and topics through colloquium-style lectures by mathematicians from the Stanford community and elsewhere. Students also work on research projects related to their core studies. The academic program is supplemented by many social and recreational activities including organized sports and several field trips in the greater San Francisco Bay Area.

Summer Math

Mount Holyoke College

Contact: *Charlene and James Morrow, Directors*

Phone: *413-538-2608*

Fax: *413-538-2002*

Mailing address: *SummerMath
Mount Holyoke College
50 College Street
South Hadley, MA 01075-1441*

e-mail: *summermath@mtholyoke.edu*

web address: *<http://www.mtholyoke.edu/proj/summermath/>*

Whether you love math or hate it, SummerMath can help you strengthen your mathematical thinking and communications skills, develop problem solving strategies and computer skills, and build your confidence. Introduced in 1982 by Mount Holyoke College, one of the nation's finest liberal arts institutions, SummerMath is a nationally acclaimed four-week program for young women entering ninth through twelfth grades. The program has been featured on "ABC World News Tonight with Peter Jennings," on the "Today Show," and in Newsweek. We believe young women stay with mathematics longer - and keep more options open - when feeling confident and when seeing how math applies to the real world because math is in just about everything, from digital sampling to design and DNA.

At SummerMath you won't just sit in class listening to lectures and you won't spend hours struggling with math problems by yourself. In each class you will work in pairs, and use your hands, eyes, imagination and each other to discover how math applies to everyday life. Your instructors and classmates will listen to you and take you seriously. When you have questions, they will work with you to understand. It is work in which creativity and problem-solving replace lectures and formulas.

A typical Day At SummerMath will be fun, challenging and varied. Many students find that friendships made at SummerMath last for years.

After classes end, you'll have time to write letters, talk to friends, use the Mount Holyoke computer facilities, and participate in the afternoon recreation program, which focuses on athletics. Mount Holyoke's Kendall Sports and Dance Complex provides facilities for basketball, swimming, tennis, aerobics, dance, squash and more. The College's 800 acre campus provides a beautiful setting for running, walking and biking. You will live in a college dormitory, where the residence program is organized by an experienced Head Resident. There are also college-student Residence Assistants, one for every ten students, who provide supervision and mentoring.

Summer Mathematics Institute

Oakland University, Department of Mathematical Sciences

Contact: *Professor Marc J. Lipman, Director*

Phone: (248) 370-3430

Fax: (248) 370-4184

Mailing address: *Summer Mathematics Institute
Department of Mathematics and Statistics
Oakland University
Rochester MI 48309-4485*

e-mail: lipman@oakland.edu

web address: <http://www.oakland.edu/links/math/ousmi.html>

The Summer Mathematics Institute is a free opportunity for bright and gifted pre-college students to interact with university faculty and each other, to take some challenging math classes that earn college credit and have fun in an academic atmosphere.

The Institute runs approximately from late June through the first week of August each summer. Students are encouraged to apply early (before the deadline of mid-May).

The Summer Mathematics Institute at Oakland University provides an exciting mathematics program to stimulate the mathematical development of bright students from Southeast Michigan. Students are selected based on both exceptional talent and interest in mathematics. Those selected will generally have completed the tenth or eleventh grade, but very bright students at the ninth grade level who have exceptional talent and have accelerated their mathematical studies should also apply.

A major component of The Summer Mathematics Institute at Oakland University is the teaching of advanced undergraduate mathematical concepts from probability theory, number theory, group theory, combinatorics, graph theory, statistics and linear algebra for college credit, in a creative environment with a high level of mathematical activity. These are interesting topics which can expand the horizons and confidence of bright students, and encourage them to work to their fullest potential. During the program the students also participate in supervised computer lab activity.

The Institute will have the use of a computer laboratory reserved for the participants. Students at the Institute will be given instruction on the use and ideas behind symbolic mathematical software (such as Maple or Mathematica), which enable computers to answer sophisticated mathematical questions. Students will also be encouraged to explore self-directed mathematical investigations independently.

Texas State University Honors Summer Math Camp

The Texas State University Honors Summer Math Camp is a 6-week residential program for academically talented students. The goal is to excite young students about doing mathematics, to teach the students to reason rigorously and precisely, and to develop questioning minds. Following in the tradition of the Ross Summer Program, we teach students to "think deeply of simple things" (Arnold Ross), while inspiring students to share in the joy and excitement of finding the simple mathematical ideas which underlie and explain seemingly complex problems. Perhaps the best description of the program is from our participants:

"Texas State HSMC is different from other academic camps in that it lets students explore the mathematical frontier by themselves."

"This camp brought together students of all races and social/economic classes."

"This camp has exposed me to more than any other single experience in the last 15 years of my life. Obviously I learned number theory, but that isn't even what I'm talking about. I learned how to turn a group of strangers into some of the closest friends I have ever had; I enhanced my self-confidence; I learned more patience, and the list goes on."

First year students take courses in Elementary Number Theory and Mathematical Computer Programming. Career opportunities, the dynamics of group work, and leadership development are discussed in an Honors Seminar course.

Returning students study Combinatorics, Abstract Algebra, Analysis and Topology. Advanced students may work individually or in teams on a research project to submit to the Siemens-Westinghouse or Intel competitions, supervised by a faculty mentor. Extracurricular activities include weekly seminars by guest speakers, picnics, recreation each afternoon including aerobics, volleyball, basketball, or tennis, and weekend excursions that give the participants a chance to relax and enjoy the local surroundings. Students are provided with a copy of Mathematica to use in their schoolwork or research project, and also make presentations at their high school to math clubs or classes. In the past 5 years, 43 HSMC students have been semi-finalists in the Siemens-Westinghouse Math, Science and Technology Competition, with 21 regional finalists, and 6 national finalists.

The application form consists of a personal essay, teacher recommendation form, and transcript including SAT or PSAT scores. Students should be rising 10th - 12th graders. Interested students should contact Professor Max Warshauer, Honors Summer Math Camp, Texas State University, San Marcos, TX 78666. Phone: (512) 245-3439, Fax: (512) 245-1469, e-mail: max@txstate.edu. For an on-line application, see www.txstate.edu/mathworks.

University of Chicago Young Scholars Program

The University of Chicago Department of Mathematics conducts a four-week commuter Young Scholars project (YSP) in mathematics and computer science for approximately 100 students entering grades 7 through 12. Students in the YSP are exposed to the environment and resources available at a major research university and are provided with the opportunity to obtain a realistic assessment of the requirements necessary to succeed in careers in mathematics and science. There are no fees of any sort for this program.

The program is aimed principally at students who attend the Chicago Public Schools. The goal is to identify mathematically talented students, especially members of minority groups and females, and provide them with a rich and diverse experience so that they will be better able to prepare for possible careers in research or education in science and mathematics. The program is intended to provide enrichment, not acceleration, and is designed to cultivate in students an understanding of the extraordinary variety of ideas and opportunities in the mathematical and physical sciences.

In summer 2005, the program's mathematical focus is on geometry and symmetry with the content and sophistication varying according to the grade level of the participants. The staff of the YSP is made up of senior faculty, junior faculty, graduate students and undergraduate students from the University of Chicago and other institutions.

Students in all three components will spend a significant amount of time in the computer laboratory carrying out research activities related to their course work. Students and staff will interact in daily problem sessions to study ideas and open problems. A follow-up program focusing on problem solving will meet on twelve Saturdays during the academic year.
